

CERTIFICATE

on antimicrobial properties of the

DYPHOX® Universal-Beschichtung

of the company:

TriOptoTec GmbH
Am Biopark 13
93053 Regensburg, Germany

has been successfully tested

against the bacteria

Acinetobacter baumannii DSM 30008

as **antibacterial**

germ reduction by more than 99,99 %

according to ISO 22196 (modified)

In contrast to the standard method of the germ contamination test on a covered and thus permanently moist surface, the test of the universal coating was carried out dry at room temperature and under the influence of visible light.

The antibacterial effect is clearly due to the photocatalytic effect of the tested universal coating.

For details see audit report no. 3607.2

The holder of the certificate is entitled to mark parts or surfaces of the tested material with the following sign:

Nürnberg, 28. April 2020
